EDUCATION

Mersin University | 2023-2027

Information Systems and Technologies

SUMMARY

Full Stack Software Developer with hands-on experience in modern web, mobile, and desktop application development. Served as the mobile developer for a TUBITAK (2209-A) backed AI project, successfully unifying frontend and backend architectures through the end-to-end integration of a Flutter UI with Flask REST API services. Proficient in Angular, TypeScript, React, C#, and SQL — seeking to apply analytical problem-solving skills to build scalable, modern, and sustainable software systems.

WORK EXPERIENCE

SOFTWARE DEVELOPER INTERN | NEUROSOUND ATTENTION AND PERCEPTION DEVELOPMENT CENTER (JUN 2026 – AUG 2026)

- Developed and maintained the responsive user interface of an enterprise CRM system utilizing Angular, TypeScript, and CSS.
- Integrated RESTful APIs to establish and optimize end-to-end data flow between frontend components and backend services.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C#, Dart, SQL
Frontend & Web: Angular (Standalone), React, HTML5, CSS3, SCSS, Streamlit
Backend & Database: Node.js, Express.js, Flask, RESTful API, MSSQL, Data Modeling, JWT
Mobile & Desktop: Flutter, Cross-Platform Development, PyQt5, CustomTkinter
AI & Computer Vision: YOLOv8, OpenCV, Real-Time Pipelines, Audio Feature Extraction (MFCC), Scikit-learn, Pandas
Tools & Practices: Git/GitHub, Docker, Google Cloud, Linux, OOP, Multithreading (ThreadPoolExecutor)

PROJECTS

Creator Nexus - Full Stack Collaboration Platform

- Architected and developed a full-stack platform for developers using Angular (Standalone/Zoneless) and Node.js/Express, integrated with a Microsoft SQL Server (MSSQL) database.
- Engineered a robust security pipeline featuring JWT session management, Bcrypt password hashing, and a bypass-resistant Nodemailer email verification workflow to prevent unauthorized access.
- Designed a responsive, bilingual (EN/TR) glassmorphic UI, securing client-server communications with HTTP Helmet headers, Express Rate Limit, and ng-recaptcha bot protection.

SmartCry - AI-Powered Baby Analysis System (TUBITAK 2209-A)

- Led the mobile development for a TUBITAK-funded AI research project, building a cross-platform application using Flutter.
- Integrated the frontend UI with a Flask REST API to process real-time audio analysis (MFCC, Mel-Spectrogram) and classify needs with a low-latency architecture.
- Optimized the end-to-end data flow between mobile clients and AI modules, implementing CORS support and preparing the backend for containerized deployment via Docker.

Smart Recycling & Object Detection System

- Trained a YOLOv8s deep learning model on a custom dataset of over 8,150 images to classify 4 waste categories, achieving an 88% overall accuracy (mAP50).
- Developed a real-time computer vision pipeline utilizing OpenCV, optimizing BGR-RGB conversions to achieve an average inference speed of 4.5ms per image.
- Built and deployed an interactive web dashboard using Streamlit to facilitate live camera feeds and static image analysis for end-users.

CERTIFICATES

- **Cloud Computing with Google Cloud — BTK Academy (Apr 2026)**
- **Data Modeling — BTK Academy (Jun 2026)**
- **Version Control: Git and GitHub — BTK Academy (Jul 2024)**
- **C# Programming — BTK Academy (May 2024)**
